

```
#include <fstream>
#include <iostream>
using namespace std;
int main () {
    char input[75];
    ofstream file;
    file.open("database.txt");
    cout <<"Writing to a text file:" << endl;
    cout << "Please Enter your name: ";
    cin.getline(input, 100);
    file << input << endl;
    cout << "Please Enter your age: ";
    cin >> input;
    cin.ignore();
    file << input << endl;
    file.close();
    ifstream is;
    string line;
    is.open("database.txt");
    cout << "Reading from a text file:" << endl;
    while (getline (is,line))
    {
        cout << line << endl;
    }
    is.close();
    return 0;
}
```
